

User Story

Rules

Example

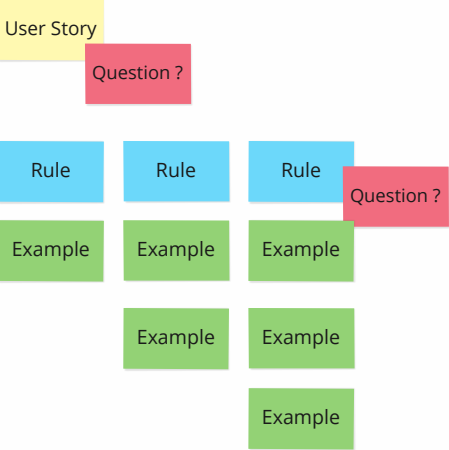

Questions

We start by **writing the User Story** being discussed on a yellow post-it note and placing it at the top of the table.

Then, we write each of the **acceptance criteria, or rules** we already know, on a **blue post-it** and place them under the yellow post-it of the User Story.

For each rule, we may need **one or more examples** to illustrate it. We write them on a **green post-it** and place them under the rule concerned.

While discussing these examples, we may **discover questions that no one in the room can answer**. These are written on a **red post-it** and the conversation continues.

- Outcome**
- New User Stories / split
 - Refined rules / acceptance criteria
 - Key examples
 - Shared understanding

- Gherkin**
- *Given* <context>
 - *When* <action/behavior>
 - *Then* <expected result>

Define Pivot
Currency

As a Foreign Exchange Expert
I want to be able to define a Pivot Currency
So that I can express exchange rates based on it

Add an
exchange rate

As a Foreign Exchange Expert
I want to add/update exchange rates by specifying : a multiplier rate and a currency
So they can be used to evaluate client portfolios

Convert a
Money

As a Bank Consumer
I want to convert a given amount in currency into another currency
So it can be used to evaluate client portfolios

Ubiquitous Language

Pivot Currency The chosen pivot currency is the currency via which the other two of these three currency values are calculated.

[How the pivot currency conversion works](#)

The use of the pivot currency to convert currency amounts is best illustrated using examples. Remember that all exchange rates must be defined from the pivot currency to the other currencies.

Example 1: Transaction Currency as Pivot

The following currencies and rates have been defined and the transaction currency is the pivot currency.

Currency	Example 1 Rate from EUR to ...	Example 2 Rate from JPY to ...
GBP (Great Britain)	1.5	2.0
USD (United States)	2.0	2.0
